# Mediterranean Land- surface Processes Assessed From Space

With 442 Figures, 320 in colour

 Springer

# Contents

Chapter 1	Introduction	1
1.1	Space View and Ground Observations	1
1.2	Mediterranean Climatic Environment	2
1.3	Processes at Surfaces	10
1.3.1	Deforestation and Land-use Changes	10
1.3.2	Water Related Problems	16
1.3.3	Fire, Grazing, and Land Degradation	19
1.3.4	Drought, Floods, Frost, and Desertification	21
1.3.5	Coupling Between Surface and Atmosphere: The Role of the Atmospheric Boundary Layer	25
1.4	Role and Capabilities of Measurements Made From Space	30
1.4.1	Research Programmes	30
1.4.2	Expected Information	32
1.4.3	Research Strategy	33
1.4.4	Observation of Changes in Heterogeneous Landscapes: Spatial and Temporal Scales	35
1.4.5	Land-surface Change Indicators Observable from Space Spectral Characteristics of Vegetation and Soils (36); Responses of Remote Sensing Signals to Changes of Land-surface Properties (40)	36
1.5	About this Book	48
Chapter 2	Processing and Archiving of Satellite and Ancillary Data	51
2.1	Introduction	51
2.2	The Remote Sensing Data Base	55
2.2.1	Satellite Instruments	55
	The NOAA Observing System (55); Meteosat (57); Nimbus-7 (59); Landsat (59); SPOT (61); DMSP (62); ERS-1 and ERS-2 (62); TRMM (63); Terra (64); Envisat (65); Aqua (66)	
2.2.2	Aircraft Instruments	66
	The Use of Aircraft for Land-surface Process Studies (66); AVIRIS (67); TMS (68); AIRSAR (68); DIAL (69)	
2.3	Reception, Acquisition and Availability of Satellite Data	70
2.3.1	Reception of AVHRR (HRPT) Data	70
2.3.2	Reception of Meteosat Data	72
2.3.3	Acquisition of Landsat TM Data	72

2.3.4	Acquisition of SPOT Data	73
2.3.5	Acquisition of Nimbus SMMR and NOAA-AVHRR GAC Data	73
2.3.6	Acquisition of ERS 1/2 Data	74
2.4	Calibration of Satellite Data	74
2.4.1	Calibration of the AVHRR Short Wave Channels Detection and Causes of Signal Degradation (74); Effective Signal Degradation of the NOAA-11 AVHRR Shortwave Channels (75); Intercalibration of NOAA-14 and NOAA-11 Instruments (81); Comparison with Other Calibration Studies (83); Intercalibration Between NOAA-16 and NOAA-11 Instruments (84)	74
2.4.2	Calibration of AVHRR Thermal Channels	88
2.4.3	Conversion of Meteosat Signals to Absolute Values Visible Channel (90); Infrared Channel (92)	90
2.4.4	Conversion of Landsat Data to Absolute Values	92
2.4.5	Conversion of SPOT Data to Absolute Values	93
2.4.6	Calibration of Nimbus 7 SMMR Data and Orbit Stability	95
2.5	Georeferencing and Geographical Registration	96
2.5.1	Georeferencing of AVHRR Data	96
2.5.2	Map Projections and Registration Methods	96
2.5.3	Universal-Transversal-Mercator projection (UTM)	99
2.6	Cloud Detection and Elimination	100
2.6.1	Definition of the Cloudless Atmosphere and "Cloud Screening"	100
2.6.2	Previous Cloud Detection Algorithm	100
2.6.3	Cloud Mask Generation Used for the MEDOKADS Product: The Dynamic Threshold Algorithm	101
2.6.4	Improved APOLLO Cloud Analysis	103
2.6.5	Reconstruction of Cloudless Time Series with the Aid of Fourier Components Time Series Analysis (104); Fourier Transform (105); Harmonic Analysis of Numerical Time Series (HANTS) (107)	104
2.7	Ancillary Data	112
2.7.1	Introduction	112
2.7.2	Elevation of Land Surface	113
2.7.3	State of the Atmosphere Operational Data Sources (114); Water Vapour (116); Ozone (122); Aerosol (122); Comparative Surface Measurements (126)	114
2.8	Satellite Data Archiving	128
2.8.1	Development of Physical Archives Media	128
2.8.2	Examples of Data Archives Raw Data Archive At the Free University of Berlin (130); Preprocessed AVHRR Data Remapped to Polar Stereographic Map Projection (130)	130
2.8.3	The Mediterranean Extended Daily One-km AVHRR Data Set (MEDOKADS) of the Free University of Berlin	131

2.8.4	Other Satellite Data Archives	133
	AVHRR Data (133); Archives of Meteosat Data (134); Windscatterometer Data (134); Towards a Distributed On-line Access Archive (135)	
Chapter 3	Radiative Processes of the Surface - Atmosphere System	137
3.1	Introduction	137
3.2	Interactions of Electromagnetic Waves with the Surface	139
3.2.1	Elementary Processes	139
	Plain Surfaces (139); Scattering and Reflection From Complex Surface Structures (145); Reflectance Terminology (148)	
3.2.2	Solar Radiation	151
	Interaction With Soils (151); Interaction with Water and Wet Surfaces (153); Interaction With Vegetation Covered Soils (154); The Albedo Dilemma (157); Net Radiation at Inclined Surfaces (158)	
3.2.3	Thermal IR Radiation	159
3.2.4	Microwave Radiation	161
	Spectral Range (161); Technology (162); Dielectric Constant (163); Emission (164); Effect of Vegetation (166) Reflection and Scattering (167)	
3.3	Atmospheric Radiative Transfer	168
3.3.1	Processes	168
3.3.2	Radiative Transfer in Scattering Atmospheres	171
3.3.3	Radiative Transfer in Absorbing and Emitting Atmospheres	173
3.3.4	The Overlapping Region Around 3 $\mu\text{m}$	176
3.4	Radiation Codes Suited for Atmospheric Corrections	177
3.4.1	A Landsat-TM scheme	177
3.4.2	A One Parameter Meteosat and NOAA-AVHRR Scheme	179
3.4.3	Split-window Technique (SWT)	180
3.4.4	Multi-angle Methods	182
3.4.5	The HITRAN, MODTRAN, and LOWTRAN Family	183
3.4.6	The "Simulation of the Satellite Signal in the Solar Spectrum" Algorithm	185
3.4.7	Autonomous Atmospheric Compensation (AAC)	187
3.4.8	A Four-stream Atmospheric Correction Procedure for Broadband Albedo	188
3.5	From Basic Theory to Application	189
Chapter 4	Primary Level Products	191
4.1	Introduction	191
4.2	From Radiance to Reflectance	193
4.2.1	Top of Atmosphere Spectral Reflectance	193
4.2.2	Normalization of TOA-data for Illumination and Observation Geometry	194
	Methods (194); Results of Model Calculations (195);	

Empirical Determination of the BRDF (202)	
4.2.3 Some Immediate Conclusions	207
4.2.4 From TOA to Surface Reflectance	207
4.3 Intercomparison and Validation of Reflectance Measurements	209
4.3.1 Techniques	209
4.3.2 Test for Atmospheric Correction	210
4.3.3 Area Integrated Reflectances of the EFEDA Experimental Areas Derived From Landsat-TM and AVHRR Data	211
4.3.4 Comparative Ground Based Measurements	212
General Remarks (212); Albedometer Measurements (212); Reflectance Spectra (218); Radiometric Measurements (219); Comparison with Satellite Data (219)	
4.4 Radiometric Temperatures	222
4.4.1 Infrared TOA Radiometric Temperatures	222
4.4.2 Radiometric Surface Temperatures	223
4.4.3 Sea Surface Temperatures (SST)	224
4.4.4 Analytic Representation of the Diurnal Temperature Cycle	225
4.4.5 Microwave Brightness Temperatures	228
Atmospheric Effects on Microwave Signals	232
4.4.7 Validation of Radiometric Temperatures	232
Thermal Infrared Radiometric Temperatures (232); Microwave Brightness Temperatures (234)	
4.5 Active Microwave Products	234
4.5.1 Primary Products	234
4.5.2 Validation of Active Microwave Data	240
4.6 Vegetation Indices	241
4.6.1 Spectral Shortwave Indices	241
4.6.2 Microwave Indices	244
Microwave Polarization Difference Index (244); MPDI and NDVI (245)	
Chapter 5 Higher Level Variables and Their Validation	249
5.1 Introduction	249
5.2 Radiative Properties of Land Surfaces I: Emissivity and Thermodynamic Temperature	251
5.2.1 TISI Algorithm	251
5.2.2 Relation Between Emissivity and NDVI	257
5.2.3 Validation	258
5.3 Radiative Properties of Land Surfaces II: Broad-band Hemispherical Reflectance	265
5.3.1 Narrow-band to Broad-band Conversion	265
5.3.2 Validation	272
5.4 Radiation Fluxes	276
5.4.1 Nomenclature	276
5.4.2 Net Shortwave Radiation Flux Density	276
5.4.3 Net Longwave Radiation Flux Density	281

Contents	XV
5.4.4 Radiant Exposure	283
5.4.5 Validation	285
Instrumentation (285); Typical Radiation Fluxes at the Surface (289); Comparison with Satellite Data (291); Radiation Fluxes at High Spatial Resolution (295)	
5.5 Surface Heat Fluxes	297
5.5.1 Theoretical Basis	297
5.5.2 Computation Schemes	299
DEMI-SEC (299); SEBAL (299); Hydrological Approach (305)	
5.5.3 Results and Validation	307
Surface Temperatures as Wetness Indicator (307); Soil Heat Flux (308); Sensible and Latent Heat Fluxes (314); Diurnal Evolution of Fluxes (320); Other SEBAL Products: Resistance to Evaporation (323)	
5.6 Hydrological Aspects I: Soil Moisture	325
5.6.1 Dual-Frequency Approach	325
Algorithm (325); Validation (326)	
5.6.2 Estimating Near Surface Soil Moisture with SAR Systems	327
Introduction (327); Method (328); SAR Estimates of Soil Moisture Content During Efedá-spain and Hapex-sahel (331); Conclusions (337)	
5.7 Hydrological Aspects II: Precipitation	337
5.8 Indicators of Vegetation Conditions	341
5.8.1 Photosynthetic Active Radiation, Vegetation Indices and LAI	341
Definitions (341); Leaf Area - Vegetation Index Relationship (342); "Red Edge" Shift and Chlorophyll Content (345)	
5.8.2 Field Radiometry and Data Processing	346
5.8.3 A Case Study on Corn and Barley	348
Experimental Site and Ground Measurements (348); Results of Broad Band Analysis (350); Results of the High Spectral Resolution Analysis (353)	
5.8.4 Comments	354
5.8.5 Canopy Water Content Derived from Optical Data	355
Algorithm (355); Results (358)	
5.9 Climate Aspects	363
Chapter 6 From Research to Application	369
6.1 Introduction	369
6.2 Biosphere Processes: Key Variables, Models and Scales	373
6.2.1 Main Driving Variables of Biosphere Processes	373
Processes (373); Models (375)	
6.2.2 Local Processes and Global Models: Spatial Heterogeneity and Scaling	377
6.2.3 From Local to Global Scales	381
6.3 Characterization of Local Vegetation Development	383

6.4	Change Detection Methods	389
6.4.1	Mapping and Monitoring of Land-surface Changes	389
6.4.2	Change Detection Techniques	390
6.5	Scales of Land-surface Variability	393
6.5.1	Spatial Pattern	393
	Mediterranean Topographic Structures (393); Vertical Structures (400)	
6.5.2	Classification and Aggregation	403
6.5.3	Temporal Scales	405
6.6	Combination of Satellite Data of Different Provenience	407
6.6.1	Integration of Data with Different Spatial and Temporal Features	407
6.6.2	Merging NOAA-AVHRR and Landsat-TM Vegetation Indices	407
6.7	Multispectral Classification of Land-surface Types	413
6.7.1	Methodology	413
6.7.2	Example of a supervised classification	413
6.7.3	Surface Discrimination by Application of the Temperature Independent Spectral Indices (TISI)	416
	Introduction (416); Methodology of Parameters Retrieval (417); Data Used (417); Conclusions (421)	
6.7.4	Vegetation Canopy Characterization by Microwave Transmittance	421
6.8	Decomposition of Pixel Contents	423
6.8.1	Spectral Decomposition	423
	Prerequisites (423); Theory (424); Example (427)	
6.8.2	Fractional Vegetation Cover Determination by Unmixing Surface Temperature	429
6.9	Seasonal and Interannual Variability as Seen in NOAA-AVHRR Images	433
6.9.1	Thermal Infrared Data Series	433
6.9.2	Short-wave Channels Data Series	437
	The Role of Vegetation as Change Indicator (437); Basin-wide Data Representation (438); Regional Variability (444)	
6.10	Vineyard Change Detection	453
6.10.1	Introduction	453
6.10.2	Methodology	454
6.10.3	Results	454
6.11	Estimation of Weather Impact on Vegetation Cover Along the Israeli Transition Zone Using AVHRR Data	461
6.11.1	Introduction	461
6.11.2	Study Area	462
6.11.3	Method	462
6.11.4	Results and Discussion	463
6.11.5	Conclusion	467
6.12	Monitoring of Soil Moisture Fields and Change Detection by Passive Microwave Remote Sensing	469

6.12.1	Introduction	469
6.12.2	The Dual-Frequency Approach	469
6.12.3	Available Data and Validation	471
6.12.4	Degradation/Aridification Mapping over the Iberian Peninsula	472
6.13	Integration of Conventional and Remote Sensing Data to Model Transpiration of Forest Mediterranean Ecosystems	477
6.13.1	Background	477
6.13.2	The Model FOREST - BGC	478
6.13.3	Study Area and Data	479
6.13.4	Ancillary Data Topography (480); Meteorological Data (481); Surface Data: Leaf Area Index (481); Surface Data: Transpiration (481); Satellite Images (482)	480
6.13.5	Data Processing Evaluation Strategy (482); Simulation of Meteorological Data for the Forest Test Sites (483); Derivation of LAI Profiles From Different Sources (483); Calibration and Validation of FOREST-BGC (484)	482
6.13.6	Results Simulated Meteorological Data (485); Measured and Estimated Daily LAI profiles (486); Model Calibration (487); Model Validation (487)	485
6.13.7	Study Area San Rossore	489
6.13.8	Conclusions	491
6.14	Use of GAC NDVI Data for Cropland Identification and Yield Forecasting in Mediterranean African Countries	493
6.14.1	Introduction	493
6.14.2	Study Area Environmental Features (494); Agricultural Features (495)	494
6.14.3	Data Cartographic Data (495); Crop Yield Data (496); Satellite Data (496)	495
6.14.4	Data Processing and Results Computer Facilities (497); Pre-processing (497); Correlation Analysis with Global NDVI Data (497); Correlation Analysis with NDVI Data of Single Land Cover Classes (498); Correlation Analysis with NDVI Data of Selected Pixels (500); Evaluation of Produced Maps (504); Evaluation of the Procedure for Operational Yield Forecasting (504)	497
6.14.5	Conclusions	505
6.15	Drought and Fire Impacts	507
6.15.1	Introduction	507
6.15.2	Climatological Characterization and Preliminary Analysis of Burned Area in A Study Pilot Area	508
6.15.3	Satellite Image Processing	510
6.15.4	Forest Evolution and its Relationship with Rainfall:	

Application to Post-fire Evolution	512
Site Selection (512); Temporal Characteristics of NDVI and its Relationship with Rainfall (513)	
6.15.5 Multispectral Analysis of Burned Areas	516
6.15.6 Discussion and Conclusions	521
6.16 Assimilation of Initial Soil Moisture Fields with Meteosat and NOAA Data	523
6.16.1 Introduction	523
6.16.2 Assessment of the Land Surface Energy Balance Using Satellite Data	525
6.16.3 Outline of A "Poor Man's" Assimilation Procedure	528
Basic Assimilation Steps (528); Horizontal Averaging (529); Verification of Results (530)	
6.16.4 Selected Case Study and Results	530
Selected Case Study (530); Verification of Sebal-results with Ground Based Flux Measurements (532); Construction of A New Soil Moisture Field (533); Results of Simulations with the New Initial Soil Moisture Field (534)	
6.16.5 Conclusions and Guidelines for Further Development	537
6.17 Methodology for Validation of Remote Sensing Data Products: The Valencia Anchor Station	541
6.17.1 Introduction	541
6.17.2 Definition of Anchor Stations	542
6.17.3 Spanish Anchor Stations	545
6.17.4 Scientific Objectives of the Valencia Anchor Station	545
Definition of A Large Scale Validation Area for Low Spatial Resolution Missions (545); Definition and Characterisation of A Large Scale Reference Pixel (546); Scaling Issues: Aggregation and Disaggregation, Time Interpolation and Spatial Averaging (547)	
6.17.5 Specifications of the Valencia Anchor Station	548
6.17.6 Simulation of Top of the Atmosphere Ceres Radiances	553
6.17.7 Conclusions and Future Activities	556
6.18 Assessment of Land-surface Changes in Space and Time - General Conclusions	559
Appendices	563
Appendix 1 The ECHIVAL Field Experiment in Desertification Threatened Areas (EFEDA)	565
A.1.1 The EFEDA Research Concept	565
A.1.2 The Castilla - La Mancha Experiment	566
A.1.4 The Matera-Rutigliano Experimental Site	585
A.1.5 The Tuscan Experimental Sites	588
A.1.6 Reflectance and Albedo Measurements in Africa	591
A.1.7 General Results	595
Appendix 2 Meteorological Terminology	599

Appendix 3 Soils	603
A.3.1 Description of Soils	603
A.3.2 Soil Types	603
A.3.3 Soil Degradation	608
Appendix 4 Characteristics of Earth Observation Satellites and Remote Sensing Instruments	611
A. Satellites and Their Instruments	611
B. Aircraft Instruments	628
Appendix 5 Useful Formulae and Data	631
A.5.1 The Spectrum of the Solar and Terrestrial Radiation	631
A.5.2 Solar Radiation	632
A.5.3 Airmass	636
A.5.4 Optical Depth of the Atmosphere	637
A.5.5 Determination of the Optical Depth From the Ground	638
A.5.6 Relationship Between UTM and Longitude/Latitude Coordinates	639
A.5.7 Evaporation Equivalents	641
A.5.8 Relationship Between Dielectric Constant and Soil Moisture	641
Appendix 6 Spectral Measurements	643
A.6.1 Introduction	643
A.6.2 Atmospheric Infrared Spectra	643
A.6.3 Spectral Atmospheric Transmission and Optical Depth in the Wavelength Range of Solar Radiation	648
A.6.4 Angular Distribution of Spectral Longwave Infrared Surface Reflectance	653
A.6.5 Spectrometric Field Measurements of Surface Reflectance	659
A.6.6 Spectral Surface Reflection and Albedo	669
Appendix 7 Scintillometry	681
Appendix 8 AVHRR Time Series	685
A.8.1 Presentation of Large Scale Satellite Data Time Series	685
A.8.2 Temperature Time Series	687
A.8.3 AVHRR Short-wave Channel Products	692
Goal (692); Potential Error Sources (693); Mean Value and Trend Maps (699); Striking Deviations From Mean Values During the Period from 1989 to 2004 (710); Conclusions (710)	
References	715
Glossary	745
