

## Table of Contents

<i>The challenge of sustaining soils</i> .....	1
1. The rationale of the book .....	1
2. Challenges of a changing world.....	1
3. DPSIR, or how can we conceptualize the links between societies and natural systems? .....	5
4. Putting soils centre stage of the sustainability debate.....	6
5. Perspectives.....	9
6. Acknowledgements.....	9
7. References.....	10

<i>Chapter I: Endangered soils: A long-term view of the natural and social ramifications of biomass production in agriculture and forestry</i> .....	12
--	----

1. Soils and socio-ecological regimes.....	13
1.1. Non-sustainable human-soil interaction .....	13
1.2. Rights to land.....	16
1.3. Non-industrial agriculture.....	20
1.4. Agriculture and the industrial revolution .....	23
1.5. The way to high-input agriculture.....	25
2. Energy from biomass: sustainable provision today and in the future .....	26
2.1. Forest resources .....	29
2.2. Energy crops .....	32
2.3. Impacts on soils .....	32
3. Conclusions.....	34
4. References.....	36

<i>Chapter II: Productive soils, global environmental cycles and energy crops</i> .....	48
---	----

1. Introduction.....	48
2. Soils in geological cycles.....	49
3. Soil organic matter (SOM).....	50
4. The elemental cycles of carbon and nitrogen.....	53
4.1. The carbon cycle .....	53
4.2. The nitrogen cycle .....	57
5. Energy crops: A link between soil and atmosphere .....	59
6. Conclusions.....	62
7. References.....	64

<i>Chapter III: Land use from below: biofuels, urbanization and sustainable soil management in Europe and Africa</i> .....	72
1. Introduction.....	72
2. Formulating policy in a hypothetical world.....	74
2.1. Hypothetical landscapes .....	75
2.2. Hypothetical crops .....	78
3. Agrofuels (1 <sup>st</sup> -generation biofuels).....	80
3.1. EU Climate change mandates and agrofuels market development.....	80
3.2. Agrofuels production .....	83
3.2.1. Continuous cultivation versus rotation .....	84
3.2.2. Soil fertility.....	85
3.2.3. Water.....	90
3.2.4. Global food supplies.....	90
4. 2 <sup>nd</sup> -generation biofuels .....	91
4.1. Production technologies.....	92
4.1.1. Non-lignified (soft) cellulosic biomass.....	93
4.1.2. Lignified cellulose .....	94
4.2. Feedstocks.....	94
4.2.1. Crop residues .....	95
4.2.2. Forest residues .....	96
4.2.3. Short rotation plantations and woody plants .....	97
4.3. Water and albedo.....	99
4.3.1. Metrics and measurements .....	100
4.3.2. Water relations .....	102
4.3.3. Surface albedo .....	104
5. Biofuels and the African continent .....	105
5.1. Hypothetical landscapes .....	108
5.1.1. African soil potential .....	108
5.1.2. Unused and underused arable land .....	110
5.1.3. Marginal land.....	112
5.2. Soil loss.....	114
5.3. Soil-plant interactions .....	116
5.3.1. Soil fertility.....	116
5.3.2. Crop type .....	118
5.4. Water.....	122
5.4.1. Hydrological processes.....	123
5.4.2. Land-use and land-cover change .....	124
5.4.3. Biofuels crops .....	128
5.5. Albedo.....	132
6. Urbanization and climate change.....	136
6.1. Urban expansion .....	137
6.2. Soil sealing.....	138
6.3. Urban soil dependencies .....	141
6.4. Urban soils and climate change .....	144

6.5. Urbanization and African biofuels production.....	145
7. Opportunities for soil restoration .....	147
7.1. Rural soils .....	148
7.2. Urban soils .....	150
8. Summary and conclusions .....	152
9. References.....	159
<i>Appendix – The 2007 Kerner von Marilaun declaration on soils .....</i>	<i>183</i>
<i>About the Authors .....</i>	<i>185</i>
